

DEVOPS MATURITY ASSESSMENT

Overview

IT leaders are being asked to support more technology with fewer resources. One of the greatest efficiency gainers in the past few years has been the advent of numerous niche solutions with DevOps automation. During the Sofbang DevOps assessment, customers committed to improving application delivery practices and processes can explore ways to automate and improve business outcomes. Our team's proven expertise with modern DevOps tools and accelerators will help to identify any obstacles that can be streamlined to help the organization's development and operations teams thrive.

Solution Offerings

- **Wave 1** - Conduct an assessment to identify any bottlenecks or inefficiencies in your development and operational SDLC processes including your Continuous Integration and Continuous Delivery (CI/CD) pipelines
- **Wave 2** - Review the assessment through an ideation session that evaluates:
 - Areas for improvements within your delivery pipeline
 - Best practices based on similar deployments with a track record of success
 - Business needs in order to identify value use cases
- **Wave 3** - Provide your organization with a DevOps Maturity Matrix that identifies your organization's readiness around crucial DevOps components: CI/CD, Collaboration, Scalability, Cloud Platform, Manageability, Containerization, Automation, Provisioning, Security, and more

Deliverables

The DevOps Maturity Assessment with Sofbang includes a two day workshop, onsite or remote, in which Sofbang assesses the current and future state of DevOps within your enterprise. Following the analysis of the assessment, an executive readout will be provided with a clear plan for achieving value realization in 2020.

Immediate ROI

In under **two weeks**, our assessment process will provide your business with a tangible blueprint explaining exactly how DevOps investments can improve your business and reduce costs.
